## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims**

Claims 1-19 (Cancelled)

Claim 20 (Previously Presented): A sensor device, comprising:

a biosensor comprising a receptor bound on a solid substrate;

a sensor compartment having an interior and an exterior, and enclosing the

biosensor, the sensor compartment having a surface allowing external viewing of the

biosensor; and

a separation barrier forming at least a portion of the sensor compartment, the

separation barrier being selected from the group consisting of a fibril membrane, a

microporous membrane and a capillary-pore membrane, the separation barrier having at least

one pore allowing fluid communication between the interior and exterior of the sensor

compartment.

Claim 21 (Previously Presented): The sensor device of claim 20, wherein the

separation barrier separates the interior of the sensor compartment from a primary container.

Claim 22 (Currently Amended): The sensor device of claim 20, wherein the at

least one pore which allows fluid communication between the interior and exterior of the

sensor compartment is occluded with a responsive material.

{W0307494.1}

Response to Office Action dated May 18, 2006

Paper dated November 15, 2006, 2006

Attorney Docket No. 2034-044072

## **Listing of Claims**

Claims 1-19 (Cancelled)

Claim 20 (Previously Presented): A sensor device, comprising:

a biosensor comprising a receptor bound on a solid substrate;

a sensor compartment having an interior and an exterior, and enclosing the

biosensor, the sensor compartment having a surface allowing external viewing of the

biosensor; and

a separation barrier forming at least a portion of the sensor compartment, the

separation barrier being selected from the group consisting of a fibril membrane, a

microporous membrane and a capillary-pore membrane, the separation barrier having at least

one pore allowing fluid communication between the interior and exterior of the sensor

compartment.

Claim 21 (Previously Presented): The sensor device of claim 20, wherein the

separation barrier separates the interior of the sensor compartment from a primary container.

Claim 22 (Currently Amended): The sensor device of claim 20, wherein the at

least one pore which allows fluid communication between the interior and exterior of the

sensor compartment is occluded with a responsive material.

{W0307494.1}

Response to Office Action dated May 18, 2006

Paper dated November 15, 2006, 2006

Attorney Docket No. 2034-044072

Claim 23 (Previously Presented): The sensor device of claim 22, wherein the

responsive material is selected from the group consisting of cellulosics, non-cellulosic non-

protein polymers, protein polymers, lipid bilayers, and lipid-containing composites.

Claim 24 (Previously Presented): The sensor device of claim 22, wherein the

responsive material exhibits a response selected from the group consisting of eroding,

dissolving, and changing three-dimensional form.

Claim 25 (Previously Presented): The sensor device of claim 24, wherein the

response results from a change selected from the group consisting of a change in solvent

concentration, a change in pH, a change in temperature, bacterial action, endotoxin action,

enzymatic action, and contact with water.

Claim 26 (Previously Presented): The sensor device of claim 20, wherein the

surface allowing external viewing permits optical sensing of the biosensor.

Claim 27 (Previously Presented): The sensor device of claim 20, wherein the

sensor compartment has walls comprised of an opaque material.

Claim 28 (Canceled)

Claim 29 (Previously Presented): The sensor device of claim 20, wherein the

biosensor further comprises a bioactive detector molecule and signal material.

{W0307494.1}

Application No. 10/840,178 Response to Office Action dated May 18, 2006 Paper dated November 15, 2006, 2006 Attorney Docket No. 2034-044072

Claim 30 (Previously Presented): The sensor device of claim 29, wherein the bioactive detector molecule and signal material are a fluorescent receptor complex.

Claim 31 (Previously Presented): The sensor device of claim 29, wherein the bioactive detector molecule and signal material are a fluorochrome-receptor complex.

Claims 32-35 (Canceled)

Claim 36 (Previously Presented): The sensor device of claim 21, wherein the primary container is closed for analysis.

Claim 37 (Previously Presented): The sensor device of claim 20, wherein the device is capable of aseptic operation.

Claim 38 (Previously Presented): The sensor device of claim 20, wherein the external sensing is remote sensing.

Claim 39 (Withdrawn): A membrane selected from the group consisting of a fibril membrane, a microporous membrane and a capillary-pore membrane, the membrane comprising:

a receptor bound on a solid substrate; and at least one pore,

wherein the membrane forms a separation barrier and further comprises an interior and exterior of a sensor compartment of a biosensor.

Response to Office Action dated May 18, 2006

Paper dated November 15, 2006, 2006

Attorney Docket No. 2034-044072

Claim 40 (Withdrawn): The membrane of claim 39, wherein the membrane

further comprises a bioactive detector molecule and signal material.

Claim 41 (Withdrawn): The membrane of claim 40, wherein the bioactive

detector molecule and signal material are a fluorescent receptor complex.

Claim 42 (Withdrawn): The membrane of claim 40, wherein the bioactive

detector molecule and signal material are a fluorochrome-receptor complex.

Claim 43 (Withdrawn): The membrane of claim 40, wherein the bioactive

detector molecule and signal material are a combination of a first fluorescent receptor and a

second fluorescent receptor, the second receptor emitting detectable light of a unique

wavelength on excitation by fluorescent resonance transfer by the first fluorescent receptor.

Claim 44 (Withdrawn): The membrane of claim 40, wherein the bioactive

detector molecule and signal material are a combination of a first receptor and a second

receptor, the first receptor binding a cell and the second receptor undergoing a detectable

spectral change in response to material released by the cell bound to the first receptor.

Claim 45 (Withdrawn): The membrane of claim 40, wherein the bioactive

detector molecule and signal material are a combination of two inhibited fluorescent groups

linked by an enzymatic cleavage site, and wherein enzymatic action cleaves the enzymatic

cleavage site and releases the fluorescent inhibition.

{W0307494.1}

Response to Office Action dated May 18, 2006

Paper dated November 15, 2006, 2006

Attorney Docket No. 2034-044072

Claim 46 (Withdrawn): The membrane of claim 40, wherein the bioactive

detector molecule and signal material are a combination of a first receptor and a second

receptor, the first receptor binding a cell capable of releasing an enzyme and the second

receptor being an inhibited fluorescent group wherein the enzyme releases the fluorescent

inhibition.

Claim 47 (Withdrawn): The membrane of claim 40, wherein the bioactive

detector molecule and signal material is linked to the membrane via a carboxyl group.

Claim 48 (New): A sensor device, comprising:

a biosensor comprising a receptor bound on a solid substrate;

a sensor compartment having an interior and an exterior, and enclosing the

biosensor, the sensor compartment having a surface allowing external viewing of the

biosensor; and

a separation barrier forming at least a portion of the sensor compartment, the

separation barrier being selected from the group consisting of a fibril membrane, a

microporous membrane and a capillary-pore membrane, the separation barrier having at least

one pore allowing fluid communication between the interior and the exterior of the sensor

compartment, wherein the biosensor further comprises a detector molecule and signal

material wherein the detector molecule and signal material are selected from the group

consisting of a) a combination of a first fluorescent receptor and a second fluorescent

receptor, the second fluorescent receptor emitting detectable light of a unique wavelength on

excitation by fluorescent resonance transfer by the first fluorescent receptor; b) a combination

Attorney Docket No. 2034-044072

of a first receptor and a second receptor, the first receptor binding a cell and the second

receptor undergoing a detectable spectral change in response to material released by the cell

bound to the first receptor; c) a combination of two inhibited fluorescent groups linked by an

enzymatic cleavage site, and wherein enzymatic action cleaves the enzymatic cleavage site

and releases the fluorescent inhibition; and d) a combination of a first receptor and a second

receptor, the first receptor binding a cell capable of releasing an enzyme and the second

receptor being an inhibited fluorescent group wherein the enzyme releases the fluorescent

inhibition.

Claim 49 (New): A sensor device, comprising:

a biosensor comprising a receptor bound on a solid substrate;

a sensor compartment having an interior and an exterior, and enclosing the

biosensor, the sensor compartment having a surface allowing external viewing of the

biosensor; and

a separation barrier forming at least a portion of the sensor compartment, the

separation barrier being selected from the group consisting of a fibril membrane, a

microporous membrane and a capillary-pore membrane, the separation barrier having at least

one pore allowing fluid communication between the interior and the exterior of the sensor

compartment, wherein the biosensor further comprises a bioactive detector molecule and

signal material wherein the bioactive detector molecule and signal material are selected from

the group consisting of a) a combination of a first fluorescent receptor and a second

fluorescent receptor, the second fluorescent receptor emitting detectable light of a unique

wavelength on excitation by fluorescent resonance transfer by the first fluorescent receptor;

b) a combination of a first receptor and a second receptor, the first receptor binding a cell and

Attorney Docket No. 2034-044072

the second receptor undergoing a detectable spectral change in response to material released

by the cell bound to the first receptor; c) a combination of two inhibited fluorescent groups

linked by an enzymatic cleavage site, and wherein enzymatic action cleaves the enzymatic

cleavage site and releases the fluorescent inhibition; d) a combination of a first receptor and a

second receptor, the first receptor binding a cell capable of releasing an enzyme and the

second receptor being an inhibited fluorescent group wherein the enzyme releases the

fluorescent inhibition; and e) a receptor that binds a material, such that upon binding the

material, spectral features of the receptor are altered.
